**Subject:** Re: OXYCODONE no longer being ordered via PDQ

What about stores that have very little inventory on hand, have a patient come in with a legit Rx and need product. Can't inner store transfer these items?

Kermit,

The group did discuss system limitations vs store needs for patients. If I recall correctly, the line limits apply to each order individually, not as a whole or in cumulative. Therefore, a store could hit the line limit on their weekly CII whs order and then they could create a PDQ order on a daily basis and far exceed the monthly line limit total we were trying to enforce. By turning these items off of PDQ, the only way for a store to exceed the line limit is for us to put in a manual order. Hence, the Control Substance Order Override Form.

Rex, Please correct me if I got it turned around, &/or add additional information I missed. Thanks LJ

We discussed this and I was not under the impression this was a done deal. Concerned we are "all or none". We have to do what's right for patients also.

Please communicate to your stores. The email from Corporate states that the pharmacy managers have been notified, but want to make sure they are aware of the No PDQ for Oxycodone rules now.

**Subject:** OXYCODONE no longer being ordered via PDQ

This is to inform you that effective today the attached Oxycodone items can no longer be ordered via the PDQ process. We have turn the PDQ Order Indicator for these items to 'N' (no). If the store orders the items, they will receive an insufficient code of 01 'Item not allowed PDQ'. If the store insist on getting this product, you will need to use the current control drug override process. Communications on this subject have been sent to the Pharmacy Managers.

Please feel free to share this with all appropriate DC personnel. If you have any questions, please let me know.

Thanks

Doug
